Principles of Experimental Design
The basic principles for designing
experiments are as follows: 1.

Comparison. Use a design that
compares two or more treatments.

2. Random assignment. Use chance
to assign experimental units to
treatments. Doing so

1. Comparison. Use a design that compares two or more treatments.
2. Random assignment. Use chance to assign experimental units. Create roughly equivalent groups of experimental units by balancing the effects of other variables among the treatment groups.
3. Control. Keep other variables that might affect the response the same for all groups.
4. Replication.
