Astronomy.com

When a light signal (such as a radio pulse) is directed at a nearby planetary body part of the signal will be reflected back. By timing how long it takes this light echo to return and then dividing this time by 2 and multiplying by the speed of light, the distance to the planet can be determined. The animation below shows this simple behavior.

known object in the universe. But

Cosmic Distance Ladder Student Guide Answers
Summation. The distance ladder. The progression of distance determination techniques surveyed in this lab is collectively known as the Cosmic Distance Ladder. No one technique is effective at all distances and typically techniques useful at small distances are used to calibrate those used on objects at greater distances. Thus, one rung on the ladder allows astronomers to step to the next rung.

NAAP materials are designed to be flexible to accommodate a variety of needs. Student guides are provided in MS Word format (in addition to PDF format) so that they can be edited if necessary. Demonstration guides and in-class worksheets are provided for some labs, helping instructors make use of NAAP simulations even if they don't assign the accompanying lab.

Online Library Astronomy Naap Answer Cosmic Distance Ladder

NAAP – Cosmic Distance Ladder 2/8 Parallax In addition to astronomical applications, parallax is used for measuring distances in many other disciplines such as surveying. Open the Parallax Explorer where techniques very similar to those used by surveyors are applied to the problem of finding the distance to a boat out in the middle of a large lake by finding its position on a small scale drawing of the real world.
