[Glassfish Application Deployment Guide | www.uppercasing](#)

Deployment is the process of installing an application or module on GlassFish Server, optionally specifying location-specific information, such as a list of local users that can access the application, or the name of the local database. GlassFish Server deployment tools expand the archive file into an open directory structure that is ready for users.

[About Application Deployment - Oracle GlassFish Server 3.1 ...](#)

To Deploy an Application or Module by Using a Deployment Plan In the deployment plan for an EAR file, the glassfish-application.xml file is located at the root. The deployment descriptor for each module is stored according to this syntax: module-name.gf-dd-name , where the gf-dd-name depends on the module type.

[Deploying Applications and Modules - Oracle GlassFish ...](#)

To Deploy an Application or Module Use the deploy subcommand in remote mode to deploy an assembled application or module to GlassFish Server. If an error occurs during deployment, the application or module is not deployed. If a module within an application contains an error, the entire application is not deployed.
