Insights into the business world from the BBC.

Charles Hill 's Global Business Today, 4e (GBT) has become an established text in the International Business market for its excellent but concise coverage of the key global issues including the cultural context for global business, cross-border trade and investment, the global monetary system and competition in the global environment. GBT 's concise chapters give a general introduction to international business - emphasizing the environmental factors, with less coverage of operations. Charles Hill is renowned for his attention to research trends and that is evident in Global Business Today, 4e through a variety of real world examples and cases from small, medium, and large companies throughout the world

Our intuition on how the world works could well be wrong. We are surprised when new competitors burst on the scene, or businesses protected by large and deep moats find their defenses easily breached, or vast new markets are conjured from nothing. Trend lines resemble saw-tooth mountain ridges. The world not only feels different. The data tell us it is different. Based on years of research by the directors of the McKinsey Global Institute, *No Ordinary Disruption: The Four Forces Breaking all the Trends* is a timely and important analysis of how we need to reset our intuition as a result of four forces colliding and transforming the global economy: the rise of emerging markets, the accelerating impact of technology on the natural forces of market competition, an aging world population, and accelerating flows of trade, capital and people. Our intuitions formed during a uniquely benign period for the world economy—often termed the Great Moderation. Asset prices were rising, cost of capital was falling, labour and resources were abundant, and generation after generation was growing up more prosperous than their parents. But the Great Moderation has gone. The cost of capital may rise. The price of everything from grain to steel may become more volatile. The world's labor force could shrink. Individuals, particularly those with low job skills, are at risk of growing up poorer than their parents. What sets *No Ordinary Disruption* apart is depth of analysis combined with lively writing informed by surprising, memorable insights that enable us to quickly grasp the disruptive forces at work. For evidence of the shift to emerging markets, consider the startling fact that, by 2025, a single regional city in China—Tianjin—will have a GDP equal to that of the Sweden, of that, in the decades ahead, half of the world's economic growth will come from 440 cities including Kumasi in Ghana or Santa Carina in Brazil that most executives today would be hard-pressed to locate on a map. What we are now seeing is no ordinary disruption but the new facts of business life— facts that require executives and leaders at all levels to reset their operating assumptions and management intuition.

Serving as a general, nontechnical resource for students and academics, these volumes provide an understanding of the development of business as practiced around the world.

Focused Operations Management shows how to do much more with existing resources in terms of throughput, response time and quality. It provides a system view and will touch upon performance measures, operations management, quality, cost-accounting, pricing, and above all, value creation and value enhancement.

The *Innovative Business School* formulates a blueprint for the innovative business school of the next decade, with proposed areas of innovation which will train executives to transform the coming technological disruptions into an avenue for world economic development and prosperity. Offering a new model of business education, the book maps the way forward for business school innovators in exploring questions related to innovation and strategy needed on the part of academic and industry leaders and educators across demographic divides. The chapters cover an overall international and cross-cultural approach in examining the factors at play for business schools of the future and the challenges they face across a range of megatrends affecting today 's business environment. The authors impress the need for stakeholders to strategically engage others in the business and education ecosystems through commitment to experimentation, innovation, and sustainable business strategy. Identifying such opportunities for development of a new model for business schools is important to educators and policymakers in preparing to leverage and contribute to existing megatrends to create shared value for regional economies and in new directions. The *Innovative Business School* is written for business schools ' management and decision-makers, related stakeholders, universities, accreditation agencies, and postgraduate students.

Ralph Gomory and William Baumol adapt classical trade models to the modern world economy. In this book Ralph Gomory and William Baumol adapt classical trade models to the modern world economy. Trade today is dominated by manufactured goods, rapidly moving technology, and huge firms that benefit from economies of scale. This is very different from the largely agricultural world in which the classical theories originated. Gomory and Baumol show that the new and significant conflicts resulting from international trade are inherent in modern economies. Today improvement in one country's productive capabilities is often attainable only at the expense of another country's general welfare. The authors describe why and when this is so and why, in a modern free-trade environment, a country might have a vital stake in the competitive strength of its industries.
