In this new book, Dan Koretz, the US's leading expert in educational testing and measurement, openly names the failures caused by our testing policies. He documents some of the most egregious misuses and outright abuses of testing that have been imposed in the name of accountability, and he explains--and concretely illustrates--some of the most serious negative effects. Test-based accountability has led teachers to waste time on all manner of undesirable test preparation, for example, teaching children tricks to answer multiple-choice questions or ways to game the tests' scoring rubrics. Testing and test preparation have therefore displaced a sizeable share of actual instruction, in a school year that is already short by international standards. Test-based accountability has led to a corruption of the ideals of teaching. In an apparently increasing number of cases, it has led to manipulation of the tested population (for example, findings ways

to keep low achievers from being tested) and outright cheating, some instances of which have led to criminal charges and even imprisonment. And it has created gratuitous and often enormous stress for educators, parents, and most important, students. Koretz is not arguing here that test-based accountability has been a total failure. There have been a few positive effects, but they are paltry compared to the varied and severe harms it has caused. Though the evidence of these failures has been accumulating for more than twenty years, it is routinely ignored--in the design of educational programs, in public reporting of educational "progress," and in decisions about the fates of schools, students, and educators. Dan Koretz has written this book so that the evidence can no longer be overlooked.

Research for Educational Change presents ways in which educational research can fulfil its commitments to educational practice. Focussing its discussion within the context of mathematics education, it argues that while research-generated insights can have beneficial effects on learning and teaching, the question of how these effects are to be generated and sustained is far from evident. The question of how to turn research into educational improvement is discussed here in the context of learning and teaching hindered by poverty and social injustice. In the first part of the book, four teams of researchers use different methodologies while analysing the same corpus of data, collected in a South African mathematics classroom. In the second part, each of these teams makes a specific proposal about what can be done and how so that its research-generated insights have a tangible, beneficial impact on what is happening in mathematical classrooms. Combining two discourses – that of researchers speaking to one another, and that of researchers communicating their insights to those responsible for educational practice – the book deals with the perennial question of communication between those who study educational processes and those who are directly responsible for teacher education, educational research and classroom practices. This book will be key reading for postgraduates, researchers and academics in education and particularly in the areas of mathematics education, education research, teacher education and classroom practice. It will also appeal to teacher educators, practitioners and undergraduate students interested in educational research.

The author draws on scientific studies of tests and their uses to show how standardized achievement tests must play a central role in improving achievement in K-12 schools. He explains the central considerations in developing and evaluating tests and tells how tests can best be best used, covering such topics as using tests for student incentives, paying teachers for performance, and using tests in efforts to attain new state and national standards.

South African universities face major challenges in meeting the needs of their students in the area of academic language and literacy. The dominant medium of instruction in the universities is English and, to a much lesser extent, Afrikaans, but only a minority of the national population are native speakers of these languages. Nine other languages can be media of instruction in schools, which makes the transition to tertiary education difficult enough in itself for students from these schools. The focus of this book is on procedures for assessing the academic language and literacy levels and needs of students, not in order to exclude students from higher education but rather to identify those who would benefit from further development of their ability in order to undertake their degree studies successfully. The volume also aims to bring the innovative solutions designed by South African educators to a wider international audience.

Dueck demonstrates that politicians are a core part of the education system ' s problem because of their predilection for siding with

power structures in society, namely unions and teachers rather than the clients of their services—the students.
