Introduction to Finance, 17th Edition offers students a balanced introduction to the three major areas of finance: institutions and markets, investments, and financial management. Updated to incorporate recent economic and financial events, this new edition is an ideal textbook for first courses in finance—reviewing the discipline's essential concepts, principles, and practices in a clear, reader-friendly manner. Students gain an integrated perspective of finance by learning how markets and institutions influence, and are influenced by, individuals, businesses, and governments. Designed to impart financial literacy to readers with no previous background in the subject, the text provides a solid foundation for students to build upon in later courses in financial management, investments, or financial markets. Equations and mathematical concepts are kept to a minimum, and include understandable, step-by-step solutions. Divided into three parts, the book explains financial markets, discusses the functions of financial systems, reviews savings and investments in different sectors, describes accounting concepts and organizational structures, and more. Real-world examples featured throughout the text help students understand important concepts and appreciate the role of finance in various local, national, and global settings.

This textbook, originally by D. Annand and H. Dauderis, was intended for a first course in introductory financial accounting. It focuses on core introductory financial accounting topics that match pre-requisite requirements for students advancing to Intermediate Financial Accounting. A corporate approach is utilized versus beginning with a sole proprietorship emphasis and then converting to a corporate approach; this consistency throughout the book reduces confusion for the introductory student. This most recent revision by D. Marchand converted the text from IFRS to reflect the Generally Accepted Accounting Principles of the United States (U.S. GAAP).

Describes the history of accounting and double-entry bookkeeping from Mesopotamia to the Renaissance to modern finance and explains how a system developed that could work across all trades and nations. 13,000 first printing.

Research within the Disciplines is designed to help reference librarians – and students studying to become librarians – gain that deeper understanding of disciplinary differences that allows them to comfortably solve information needs rather than merely responding to questions, and practical knowledge about how to work with researchers in a library setting. The book has three chapters that cover the disciplines at the broadest level – humanities, social sciences, and sciences, plus supplemental chapters that focus on associated disciplines (research in history, business, and engineering, research using government sources) and across disciplines (interdisciplinary and critical information literacy). For the second edition of Research within the Disciplines, several chapters have been added that together give a broader and deeper overview of research across all subject areas: research practices of creative and performing artists and of clinical scientists, research in international documents, research strategies for foreign language materials, and visual literacy across the disciplines. Major shifts in technology have been accounted for that have changed how we do research and have expanded the range of resources available to researchers in all disciplines. All of the chapters have been rewritten or heavily revised; this is much more a new book than a new edition.

Business scandals are always with us from the South Sea Bubble to Enron and Parmalat. As accounting forms a central element of any business success or failure, the role of accounting is crucial in understanding business scandals. This book aims to explore the role of accounting, particularly creative accounting and fraud, in business scandals. The book is divided into three parts. In Part A the background and context of creative accounting and fraud is explored. Part B looks at a series of international accounting scandals and Part C draws some themes and implications from the country studies.

The Balanced Scorecard translates a company's vision and strategy into a coherent set of performance measures. The four perspectives of the scorecard--financial measures, customer knowledge, internal business processes, and learning and growth--offer a balance between short-term and long-term objectives, between outcomes desired and performance drivers of those outcomes, and between hard objective measures and softer, more subjective measures. In the first part, Kaplan and Norton provide the theoretical foundations for the Balanced Scorecard; in the second part, they describe the steps organizations must take to build their own Scorecards; and, finally, they discuss how the Balanced Scorecard can be used as a driver of change.
