Radiological emergency management is a term that describes efforts to prevent, prepare for, respond to and recover from an event that could result in significant radiation-related effects. Efforts to prevent radiological emergencies include actions to stop such events from happening and actions that decrease the harmful effects of such an occurrence.

File Type PDF Is 3 Radiological Emergency Management Final Exam Answers

The goal of the Radiological Emergency Response Independent Study (RERIS) course is to provide a learning experience in which participants demonstrate comprehensive understanding of radiological protection and response principles, guidelines, and regulations through a cycle of text, stimulus, response, and reinforcement. This course of instruction will improve the performance of radiological response team members. FEMA's Radiological Emergency Response Operations (RERO) Course is performance-based training that consists of 4 1½ days of hands-on, evaluated, exercised-based activities. Successful completion of the RERO course requires mastery level of certain knowledge before participation in the course. That knowledge is the focus of the RERO prerequisite courses, the Fundamentals Course for Radiological Monitors (FCRM), the Fundamentals Course for Radiological Response Teams (FCRRT) and this course, the Radiological Emergency Response Independent Study.

This Open Access volume explains how major nuclear and radiological emergencies (NREs) can have implications at local, national and international level. The response to NREs requires a competent decision-making

structure, clear communication and effective information exchange. National veterinary services have the responsibility to plan, design and manage animal production system in their countries. These activities cover animal health, animal movement control, production control and improvement, and control of the products of animal origin before their placement on the market. Release of radionuclides after NREs can cause substantial contamination in the animal production systems. Critical responsibility of veterinary authorities is therefore to prevent such contamination, establish early response mechanisms to mitigate the consequences and prevent placement of contaminated products of animal origin on the market for human consumption. This work summarizes the critical technical points for effective management of NREs for national veterinary services.

The FEMA REP RPM is a FEMA developed and maintained guidance document. The RPM serves as a key source of policy and guidance for the FEMA REP Program and its primary stakeholders, which include (1) OROs; (2) FEMA Headquarters and regional staff; (3) Federal government agencies supporting the review and approval of state, local, and tribal government plans and procedures, and (4) licensee OROs.

Course Overview This course introduces the

student to the basic concepts and terminology of the offsite emergency preparedness program for commercial nuclear power plants. It provides an introduction to the program's exercise evaluation regulations, philosophy, and methodology. Course Objectives: The pre-exercise, exercise, and post-exercise role and responsibilities of the evaluator are covered in depth. The majority of the course is devoted to the six evaluation areas: *

- Emergency Operations Management
- Protective Action Decision-making
- Protective Action Implementation
- Field Measurement and Analysis
- Emergency Notification and Public Information
- Support

Operations/Facilities Primary Audience This web-based independent study course is primarily for Federal agency and contract staff who will serve as offsite evaluators for REP exercises Limited numbers of State, local, and volunteer agency staff who are participants in REP exercises may also be interested in taking the course. This independent study course is a prerequisite for the 3-day invitation only classroom-based REP Exercise Evaluation course.

Supplement 3, "Guidance for Protective Action Strategies," to NUREG-0654/FEMA-REP-1, "Criteria for Preparation and Evaluation of Radiological Emergency Response Plans and Preparedness in Support of Nuclear Power

Plants," updates the previous version of Supplement 3, "Criteria for Protective Action Recommendations for Severe Accidents," issued July 1996. Supplement 3 provides a protective action strategy development tool based on recent technical information and is intended for use by nuclear power reactor licensees to develop site-specific protective action recommendation procedures. Offsite response organizations should use Supplement 3 to develop protective action strategy guidance for decision makers. The guidance of Supplement 3 provides an acceptable method to comply with Appendix E to Part 50, Title 10 of the Code of Federal Regulations (10 CFR) Section IV, paragraph 3 in the use of evacuation time estimates in the formulation of protective action recommendations (PARs) for the plume exposure emergency planning zone, and provides guidance for the provisions of 10 CFR 50.47(b)(10) in the development of a range of PARs. Supplement 3 also provides guidance to support the information in NUREG-0654/FEMA-REP-1 that the U.S. Nuclear Regulatory Commission finds to be an acceptable method of meeting the requirements in 10 CFR 50.47(b)(7) for the development of a public information program. However, licensees may identify alternative methods of compliance with these requirements.

"Why GAO Did This Study On March 11, 2011, a tsunami severely damaged the Fukushima

Daiichi nuclear power plant in Japan and led to the largest release of radiation since the 1986 Chernobyl disaster. Japanese authorities evacuated citizens within 19 miles of the plant. GAO was asked to examine issues related to emergency preparedness at nuclear power plants. This report examines (1) federal, licensees', and local and state authorities' responsibilities in radiological emergency preparedness, (2) the activities NRC and FEMA take to oversee licensee and local and state radiological emergency preparedness, and (3) NRC and FEMA requirements for informing the public on preparedness and NRC's understanding of public awareness. GAO reviewed laws, regulations, and guidance; examined emergency plans from licensees and local and state authorities; visited four nuclear power plants; and interviewed federal, local and state, and industry officials. What GAO Recommends To better inform radiological emergency preparedness efforts, GAO recommends that NRC obtain information on public awareness and likely public response outside the 10-mile zone, and incorporate insights into guidance, as appropriate. NRC generally disagreed with GAO's finding, stating that its research shows public response outside the zone would generally have no significant impact on evacuations. GAO continues"
