Using jythonc A script called jythonc should have been installed in the Jython installation directory when you installed the package. If it was not, it can be invoked as follows: `jython Tools\jythonc\jythonc.py`. The jythonc tool generates actual Java source code, and then invokes a Java compiler over this source code to create the.class files.

You can use the Jython Evaluator processor to read, update, or create record header attributes. Use a map when creating or updating a header attribute. If a header attribute exists, the script updates the value. If it does not exist, the script creates the attribute and sets it to the specified value.
